

$$I_2^{\{D=4-2\epsilon\}}(m^2; 0, m^2)$$

Page contributed by [R.K. Ellis](#)

The result for this bubble integral is,

$$I_2^{\{4-2\epsilon\}}(m^2; 0, m^2) = \left(\frac{\mu^2}{m^2}\right)^\epsilon \left[\frac{1}{\epsilon} + 2 \right] + \mathcal{O}(\epsilon)$$

See the file on [notation](#).
